Education:

Senior at Boston University Academy

In school coursework by Summer 2026: Multivariable Calculus, Calculus I & II, Foundations of Data Science (CDSDS 120), General Physics I & II (CASPY 211 & 212), Chemistry, Biology, Computer Science, Robotics, Woodworking.

Self-studied Coursework Completed: Stanford Machine Learning: Regression and Classification, Stanford Advanced Learning Algorithms, Stanford Unsupervised Learning, Recommenders, and Reinforcement Learning, Stanford Introduction to Statistics, MIT Beaverworks online courses in Python, GitHub, and Autonomous Underwater Vehicles. AOPS Physics I, Algebra 3, Number Theory, Counting & Probability, Geometry.

Experiences and Projects:

- FRC Robotics Sub-Team Leader (Team 8567 2022-2023; Team 246 2023-present): Scouting & Strategy Lead (2024-present). Helped program the robot's shooter, intake, and elevator (Java). Machined parts and assembled portions of the robot. Used CAD to design parts of the robot (Onshape). Managed a rotating group of scouts at competitions, discussed strategic decisions with our drive coach and other teams before matches, and curated a pick-list for alliance selection. My team won the Quality, Judges, and Innovation in Control awards at competitions in the 2023-2024 season, as well as the Gracious Professionalism, Excellence in Engineering, and Team Spirit awards at competitions in the 2024-2025 season.
- Creator of Injury Data Tracker (2024): Developed a website that web-scrapes NFL injury data and visualizes it with a series of graphs and tables (Python).
- Creator of Vocabifier (2024): Developed an app, Vocabifier, that generates parsed definitions from a list of vocabulary words through the Merriam-Webster API and formats them in a way that allows for a seamless import into Quizlet flashcards (Python).
- GEMS student and mentor-in-training (August 2022): Took part in various STEM-related experiments and projects. Dissected a pig heart, built a makeshift roller coaster for marbles, soldered electronics, and learned fundamentals in various fields like chemistry, biology, and math.
- MIT Full STEAM Ahead (July-August 2020): Participated in a series of classes and projects related to STEM and built a working pop rocket on my own.
- gbSTEM Lego Robotics Instructor (Fall 2025): Taught 5th-8th grade students to build and code LEGO robotics and complete tasks with First LEGO League materials.
- Davidson Institute Young Scholar

Technical Skills:

- Python (Matplotlib, Pandas), Java
- Mechanical tools: Onshape, Mechanical tools
- Art Tools: Adobe After Effects/Photoshop/Premiere Pro, Procreate
